

# Environmental

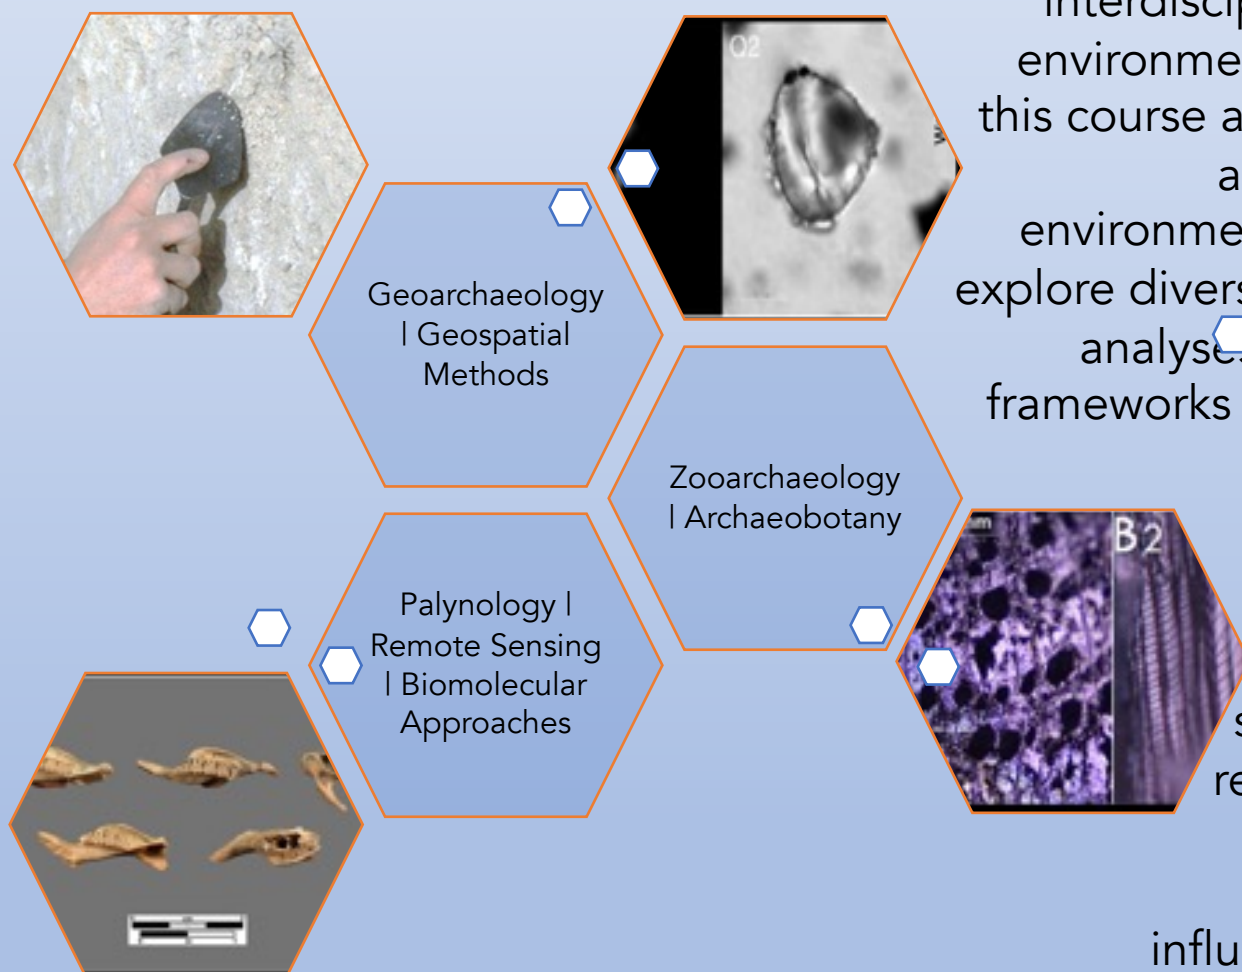

Fall 2023  
ANT4147C

# Archaeology

- What kinds of environments did our ancestors live in?
- How did they affect those environments, and how were they influenced by them?
- How do we know?
- How can we use that information in the present and future?

With a focus on the interdisciplinary science of environmental archaeology, this course address questions about past human environments. Students will explore diverse methods, data analyses, and theoretical frameworks of environmental archaeology.

Themes include sustainability and resilience over the long-term, environmental influences on cultural transformations, and anthropogenic environments.

Instructors: Daniel Contreras & Michelle LeFebvre
